- ECONOMICAL

# WINE ON TAP

Wine on tap is both sensible and sustainable; it reduces waste, is environmentally friendly and protects the flavor of the wine. The reduction in waste for a food service operation translates into higher profits and increased revenue, what's more compelling than that?

From the vineyard to the glass, the authenticity of tasting wine directly from the barrel will enhance the consumer's experience as they enjoy that special glass of wine amongst family and friends. Wine on tap delivers exquisite aromas and crisp fresh flavor, which provides an opportunity for the consumer to indulge in the best wine tasting experience the food service industry, has to offer. Wine on tap is clearly the right choice, it puts the consumer first.

Designing a wine on tap system requires industry experience and knowledge. When wine comes into contact with dispensing equipment and components, it is important to know that a wine's fine aroma and taste can be thrown off by the use of improper products. At CBS we pride ourselves on recommending and delivering the highest quality products available. To that note, CBS only specifies wine certified 304SS components such as towers, taps, shanks, fittings and keg couplers when engineering a wine on tap dispensing system. This quality assurance will provide you the peace of mind knowing that your best vintages will be delivered to the tap, fresh and clean, pour after pour.
